New nucleic acid sequence encoding Calendula officinalis calendulic acid desaturase, useful for e.g. producing transgenic plants having oil with an increased unsaturated fatty acid content,.

Claim 1c; Page 15-16; 22pp; German.

This invention describes a novel isolated nucleic acid sequence (I) encoding a Calendula officinalis calendulic acid desaturase polypeptide. The invention also describes (1) a process for producing unsaturated fatty acids, comprising introducing at least one copy of (I) or (II) into an oil-producing organism, growing the organism, isolating oil from the organism and releasing fatty acids from the oil, (2) a process for producing triglycerides with an increased unsaturated fatty acid content, comprising introducing at least one copy of (I) or (II) into an oil-producing organism, growing the organism and isolating oil from the organism and isolating oil from the organism; (3) a process for producing saturated fatty acids, comprising introducing at least one nonfunctional copy of (I) or (II) into an oil-producing at least one nonfunctional copy of (I) or (II) into an oilproducing organism, growing the organism, isolating oil from the organism

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and releasing fatty acids from the oil; (4) a process for producing triglycerides with an increased saturated fatty acid content, comprising introducing at least one nonfunctional copy of (1) or (II) into an oil-producing organism, growing the organism and isolating oil from the organism; (5) an enzyme capable of converting a diunsaturated fatty acid of to a triunsaturated fatty acid. Transgenic organisms (especially plants) containing one or more copies of (I) are useful for producing oils with an increased unsaturated fatty acid content. Transgenic organisms (especially plants) containing one or more nonfunctional copies of (I) are useful for producing oils with an increased saturated fatty acid content. (I) and fragments of (I) are also useful for isolating genomic sequences by homology screening. This sequence represents the calendulic acid desaturase described in the method of the invention

This is used in the production of acetylenic compounds. The process comprises treating C18 fatty acids having a double bond at position delta 12 with an acetylenase to form 12-ynoic acids. The acetylenic compounds can be produced by organisms such as oilseed plants, yeast and fungi which are transformed with the acetylenase DNA. These organisms can accumulate these acetylenic compounds which are chemical feedstocks, particularly for coatings, plasticisers and lubricants. The process enables the production of these acetylenic compounds from a renewable resource with high purity and at reasonable cost. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bafor M,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC This is the amino acid sequence of a novel mixed function monoxygenase of CC Crepis palaestina that is characterised as having delta-12-epoxygenase CC AAV63101). The deduced from isolated full-length cDNA clone Cpal2 (see CAAV63101). The deduced sequence contains His-rich motifs (see AAW79752-CC 54) that are characteristic of delta-12-desaturase enzymes. The Cpal2 (see was shown to be highly expressed in developing seeds, with no CC expression detectable in leaves. The invention relates generally to novel CC expression detectable in leaves. The invention relates generally to novel CC AAW79742-44), especially delta-12-epoxygenases or mixed function CC monooxygenases. These provide the means by which fatty acid metabolism CC can be manipulated in e.g. yeast, mould, bacteria, insects, birds, commmals and plants (especially oilseed plants such as flax), in CC mammals and plants (especially oilseed plants such as flax), in CC particular to convert unsaturated fatty acids to epoxygenated fatty CC acids. The invention extends to genetically modified oil-accumulating CC organisms and to the oils derived from them. These oils can be used in CC production of coatings, resins, glues, plastics, surfactants or CC lubricants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is Vernonia galamenensis fatty acid epoxidising enzyme. The present invention also describes: (i) Vernonia galamenensis fatty acid desaturase; (ii) chimeric genes comprising the fragments linked to regulatory sequences; and (iii) transformed host cells containing the chimeric genes. The DNA's from the present invention can be used to alter levels of expression of the enzymes in transformed host cells or to produce the recombinant enzymes by transformation of microbial host cells. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA encoding Vernonia galamenensis fatty acid desaturase and fatty acid epoxidising enzyme - used to alter levels of expression of the enzymes transformed host cells or to produce recombinant enzymes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to nucleic acid fragments encoding plant fatty acid modifying enzymes associated with conjugated double bond formation, comprising a modification of delta-9 position or a delta-12 position of fatty acids. The nucleic acid fragments are useful for creating chimeric gene which is useful for creating transgenic plants having altered lipid profiles. They are also useful for producing seed oil containing fatty acids comprising a modification at delta-9 position or delta-12 position. The seed is useful for improving the carcass quality of an animal by supplementing a diet of the animal with animal feed. The nucleic acid fragments encoding homologous fatty acid modified enzymes from the same or other plant species. The present sequence is Borago officinalis fatty acid hydroxlase enzyme. It is a fatty acid modifying enzyme associated with conjugated double bond formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel nucleic acid fragment encoding plant fatty acid modifying enzyme associated with modification of delta-9 position of the fatty acid, useful for creating transgenic plants having altered lipid profiles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 383

The method comprises producing a transgenic cotton plant having a gene construct which includes a fatty acid biosynthesis gene operably linked to a promoter sequence capable of conferring expression of the delta9-desaturase (delta9 stearcyl-ACP desaturase) gene, or fatty acid delta12-desaturase (olevyl-PC delta12-desaturase) gene in the seed of a cotton plant. The invention is useful for producing cottonseed oil with reduced palmitic and/or linoleic acid content, and increased stearic and/or oleic acid content. The present sequence is cotton oleoyl-PC delta12-desaturase (ghPAD2-2) protein related to the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                    This invention describes a novel nucleic acid encoding a polypeptide with desaturase activity. The products of the invention are used in the construction of constructs, vectors, organisms and transgenic plants containing the desaturase. The invention also describes methods for preparing oils or triglycerides with increased content of unsaturated fatty acids; oils, fats and fatty acid mixtures and a novel nucleic acid encoding a protein able to convert a fatty acid to a more highly unsaturated acid. The products of the invention are used to produce transgenic plants (or other organisms) that produce oils and fats with increased contents of unsaturated fatty acids, useful in preparation of foods, animal feeds, cosmetics and pharmaceuticals and in homology screening for isolation of genomic sequences. This sequence represents the bunica granatum (pomegranate) delta-12-desaturase PUFADI2 described
                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid encoding desaturase enzymes from pomegranate, useful for recombinant production of unsaturated fatty acids, for e.g. the production of food, animal feeds and pharmaceuticals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Feussner I,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20-JUL-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20-JUL-2001; 2001DE-01034660

The method comprises producing a transgenic cotton plant having a gene construct which includes a fatty acid biosynthesis gene operably linked to a promoter sequence capable of conferring expression of the delta9-desaturase (delta9 stearoyl-ACP desaturase) gene, or fatty acid delta12-desaturase (oleoyl-PC delta12-desaturase) gene in the seed of a cotton plant. The invention is useful for producing cottonseed oil with reduced palmitic and/or lincleic acid content, and increased stearic and/or oleic acid content. The present sequence is soybean microsomal omega-6 desaturase, gmFAD2-2 protein
                                                                Calendula officinalis

The products of the invention can be used for the large scale production of conjugated linoleic acids. The composition may be used for cosmetic or pharmaceutical purposes. The conjugated linoleic acids may be used for coating, painting or cold weather ester-type lubricant purposes. There is coating, painting or cold weather ester-type lubricant purposes. There is not a natural source which is rich in conjugated linoleic acids and chemical processes result in a mixture of several isomers. Plant biotechnology is cost-effective and renewable with little side effects. This sequence represents the Calendula officinalis CoFad2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids which encode a conjugase and its related enzyme a delta desaturase to be used for the large scale production of conjugated linoleic acid and linolenic acid in plants.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to Brassica plants containing recombinant nucleic acid constructs comprising (a) a wild-type microsomal Delta-12 fatty acid desaturase (Fad2) coding sequence linked to a regulatory sequence and (b a wild-type microsomal Delta-15 fatty acid desaturase (Fad3) coding sequence linked to a regulatory sequence. The plants exhibit a seed-specific reduction in native Fad2 and Fad3 gene expression. The plant produces seeds yielding an oil whose fatty acids comprise at least 86 percent oleic acid and less than 2 percent erucic acid. The plants are used to produce cannola (rapeseed) oil having a high oleic acid content, low erucic acid content, a low alpha-linolenic acid content and high oxidative stability. The present sequence represents the protein sequence of the F form of the wild-type Fad2 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Brassica; recombinant; microsomal; delta-12 fatty acid desaturase; oil; delta-15 fatty acid desaturase; seed; fatty acid; oleic acid; Fad3; erucic acid; canola; rapeseed; linolenic acid; oxidative; Fad2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to fatty acid desaturases (FAD) from Brassicaceae or Helianthus, where the FAD genes comprise at least one mutation in their sequences. The mutation is in a region encoding the His-Xaa-Xaa-Xaa-His motif of the delta-12 or delta-15 fatty acid desaturases. The invention also provides methods for producing the FAD mutant genes and gene products. The products can be used for producing plants and seeds which have altered fatty acid compositions, e.g. an elevated oleic acid content, a decreased, stabilised limoleic acid content, both elevated oleic acid and decreased, stabilised limoleic acid content or a decreased, stabilised limoleic acid content or a decreased, stabilised limoleic acid and increased level of limoleic acid. The plants may be e.g. soybean, rapsesed, sunflower, safflower, castor bean or corn. The present sequence represents the amino acid sequence of the Brassica wild-type Fad2-F gene product
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated mutant fatty acid desaturase
Brassicaceae or Helianthus plants, used for
having altered fatty acid compositions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                 The patent discloses Brassica plants and seeds having a long chain monounsaturated fatty acid (FA) content of at least 82% and an erucic acid content of at least 15% based on total FA composition. The patent further relates to genes encoding delta-12 and delta-15 fatty acid desaturases (Fad2 and Fad3 respectively). Mutations in these genes result in useful alterations in the fatty acid compositions of the seed oil e.g. mutation in Fad2 gene confers elevated oleic acid content and decreased linoleic acid content. The Brassica seeds are useful source for vegetable oil and industrial oils such as engine lubricants, transmission fluids for diesel engines and hydraulic oil. The present sequence is that of Brassica napus microsomal wild type delta-12 fatty acid desaturase-F (n-2-2-5)

in plant seeds and comprises transforming a plant with a nucleic acid construct (I) comprising a seed-specific regulatory sequence linked to either a mutant delta-12 or delta-15 fatty acid desaturase (FAD) gene encoding a protein with a mutation in a His-(Asp/Glu)-Cys (Gly/Ala)-His amino acid region. (I) encodes a mutant delta-12 or a mutant delta-15

The invention relates to a method for altering the fatty acid composition

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC FAD. Expression of this construct in plants decreases the level of CC activity of these enzymes in the cells of the plant i.e. the construct comprising a mutant delta-12 cc gene is used to decrease the level of linoleic acid in the seeds of CC plants to (soybean, rapeseed, sunflower, cil palm, coconut palm, flax, CC castor and peanut) Similarly a construct comprising a mutant delta-15 cc gene is used to decrease the levels of alpha-linolenic acid in the seeds of plants, especially Brassica canola. The new method may also be used to transform a plant with both (1) comprising DNA encoding mutant delta-12 cc and (1) comprising DNA encoding mutant delta-12 cc the levels of both linoleic and alpha-linolenic acid simultaneously in comprise seeds. These methods alter the nutritional value of the seeds of clasmostic markers in plant genetic mapping and plant breeding programs. Cc In addition (1) may been transformed. (1) may also be used as DNA cc diagnostic markers in plant genetic mapping and plant breeding programs. Cc maddition (1) may been to isolate other related FAD genes. The cc present sequence represents a Brassica napus wild type D form of cc microsomal delta-12 fatty acid desaturase 2 (FAD2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                        ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid fragment encoding or CC comprising a sequence encoding a plant enzyme that is a delta-12 CC desaturase, delta-12 hydroxylase, or delta-12 fatty acid hydroxylase. CC Chimeric genes comprising nucleic acids of the invention are used to CC create transgenic plants with altered levels of unsaturated fatty acids, CC and can modify plant lipid composition. Nucleic acids of the invention CC can be used as hybridisation probes to isolate or amplify nucleotide CC sequences encoding other fatty acid desaturases or fatty acid desaturase-CC related enzymes. They can also be used in restriction fragment length CC polymorphism (RPLP) breeding to obtain altered levels of oleic acids in CC seed oil of oil producing plant species. They can also be used to produce CC seed oil containing altered levels of unsaturated fatty acids. Nuclecic acids of the invention can combine the high oleate trait of transformed CC seed with mutations for altered fatty acid compositions to obtain new fatty acid compositions and/or improved agronomy. A vegetable oil low in CC total saturates and high in monounsaturates would provide significant CC health benefits to consumers (reduced risk of coronary heart disease) as well as economic benefits to oil processors. The current sequence CC represents a rape microsomal delta-12 desaturase amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                   Best Loc
